Re: United States Patent Application
Title: SIMULATED HUNTING APPARATUS
AND METHOD FOR USING SAME
Filed: December 9, 2003
Inventors: J. Scott Kennen, Jason D. Heald

Dear Sir/Madame:

Pursuant to 37 C.F.R. Section 1.52(e) and MPEP Section 608.05, Applicants provide this transmittal letter listing, for each enclosed duplicate compact disc labeled "COPY 1" and "COPY 2" the following:

- machine format: IBM-PC
- operating system compatibility: MS-Windows
- a list of files contained on each CD, which are identical duplicates of each other, including their names, sizes in bytes, and dates of creation (last date modified), plus any other special information that is necessary to identify, maintain and interpret the information on the compact disc:

The files listed below include the source code to compile and create the application. The preferred way to compile the application is to use Eclipse Platform 2.1 to load the appropriate source code and utilize the java compiler on a Windows based personal computer to create the application.

Further, to run the application, it is necessary to have Apple - QuickTime installed to utilize some imaging conversion routines and Suns Java SDK 1.3 or later.

These files include ASCII text-only files.

Directory listing
